

INNER GLOW

By Jenni Lane, Naturopath

Beneath the skin's surface lies a matrix of support fibre and fibrous protein that makes up the connective tissue, known as collagen. Collagen is the major structural protein in the skin that gives the skin its strength and resilience.

As our skin ages, time and exposure to environmental forces affect the elasticity of our skin, the matrix becomes weakened, affecting the deeper dermis and subcutis layers of the skin. The support fibres can become tangled and matted causing dips and hollows beneath the skin. The outer skin follows this uneven contour, resulting in surface lines and wrinkles.

Imaglow Plus™ is a natural formulation that helps to support the skin from within, containing a quintessential blend of bio-marine extracts, along with Evening Primrose Oil, Silica, Calcium, Zinc and Vitamin C. Vitamin C is the essential co-factor to enhance the action of the marine collagen, which in turn supports the action of the natural collagen within our skin, helping to replenish this vital skin component.
