

MICROGENICS COLD SORE RELIEF

A COLD SORE IS THE CULMINATION OF A RECURRENT HERPES SIMPLEX VIRAL (HSV) INFECTION AND TRIGGERS CAN BE DIFFERENT FOR EACH INDIVIDUAL.

Attacks can be provoked by stress, seasonal changes, fever, hormonal changes and an exhausted immune system. Cold sores are unsightly red blisters that occur on the mouth, lips or nose. Prodromal symptoms are often felt, including tingling, redness or itching in the affected area.

Supplements can have great effect if taken at this stage, though it is always helpful to

boost immunity to control the infection. Microgenics Cold Sore Relief provides natural ingredients that reduce severity and duration of occurrences. Increased lysine suppresses viral replication and inhibits the fabrication of a cold sore.

Olive leaf and Echinacea are herbs with immune boosting properties and antioxidant support needed in times of stress. Zinc and Vitamin C are

used to support skin healing and boost infection defence.
