

# ESSENTIAL MANUKA

## NEW ZEALAND'S INDIGENOUS TREE

The oil is extracted by steam distillation from the leaves and small stems of wild Manuka plants grown on the East Cape of New Zealand. Manuka has powerful properties to support the immune defences which make it useful in helping with various ailments. Its antibacterial effectiveness has been shown to be approximately 30 times more potent than Australian Tea Tree.

Dolphin Clinic's NZ Manuka oil is extracted using a unique steam distillation process that ensures the chemotype maintains these potent antimicrobial characteristics (higher Tikeone level is achieved compared with some other Manuka oils).

**METHOD OF USE:** Use neat on the skin and apply neat about lymph nodes (below ears, under arms, groin) for winter chills and ills, inhalation and/or bath.
